| <b>3. VIEWING BUSINESS OBJECT AUDIT LOGS .....</b>                              | <b>19</b> |

Use and copying of any IntelNotion software described in this publication requires an applicable software license.

IntelNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to IntelNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of IntelNotion LLC.

## 1. DOCUMENT AND COMPONENT VERSIONING

Typically, both the document and all its editable components are up-versioned whenever the document is saved to the system during single-user authoring or co-authoring (see details on how to save in [Module 5](#)) or following the completion of a collaborative review session (see details in [Module 9](#)). In certain instances, however, components may be up-versioned only if a 'true' content change is made within the component; else, a new version is not created. This is referred to as "**conditional up-versioning**" which is a setting that can be turned on or off for each authoring mode (single authoring, co-authoring, and collaborative review).

**Note:** The conditional up-versioning setting is not available in the IN Web Console; an Azure Cloud engineer must be contacted to implement a change.

When the document is saved in either single authoring or co-authoring (interim save or finish), the following operations performed during authoring **are** considered modifications/content **changes** (so the component would be up-versioned) regardless of the method used to make the changes (such as find/replace, Reviewing Pane, 3<sup>rd</sup> party add-ins or macros, etc.):

- Content changes made to/within component content controls (with or without Track Changes enabled)
- Formatting changes made directly to/within component content controls (with or without track changes)
- Adding comments, comment replies, or resolving comments
- Accepting/rejecting track changes

The following operations are **not** considered modifications/content **changes** (so the component would not be up-versioned) during either single or co-authoring:

- Global formatting changes such as style and numbering scheme updates at the document level.

After a collaborative review session for a document using PleaseReview is completed, the following operations performed during the review **are** considered modifications/content **changes** (so the component would be up-versioned):

- Content changes made to/within component content controls
- Adding/modifying comments and replies
- Changing comment attributes
- Accepting/rejecting changes in **PleaseReview**

**Warning:** Turning on conditional up-versioning carries a real risk of content loss as described below. Your configuration must be tested to assess this risk.

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

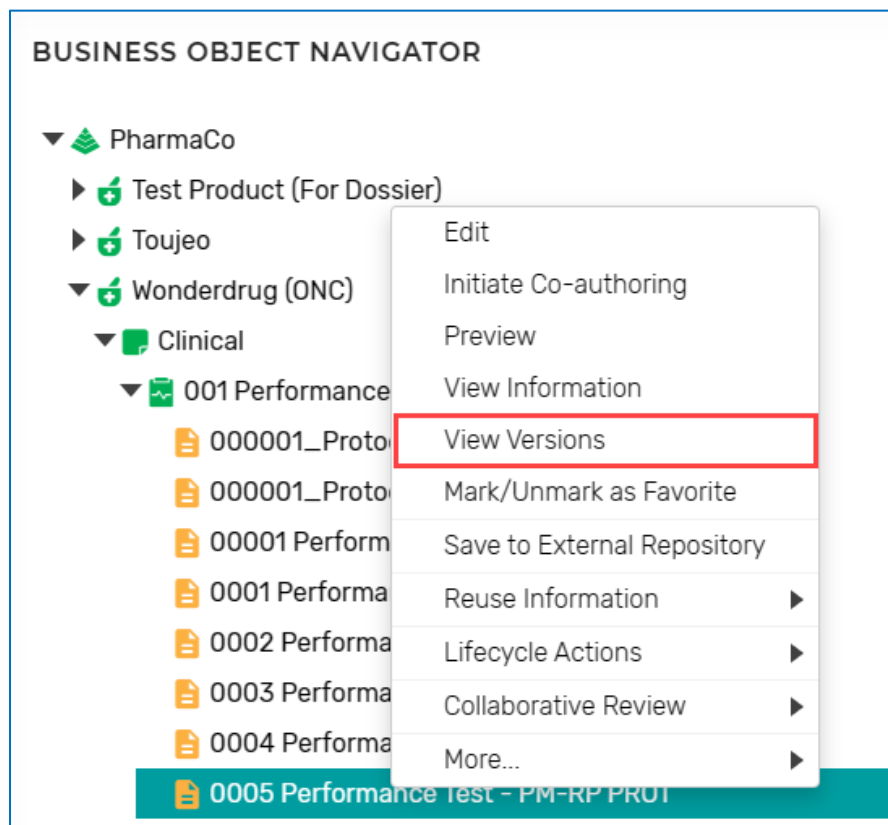

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

- Any component-level content changes made during single authoring without the IN Word app (being installed and loaded) will be lost.
  - Some component-level edits (eg, accept or reject all changes) made during single authoring may be lost if they are not accompanied by other changes. A list of such known changes will be provided upon request.
- Some or all component-level content changes made during co-authoring (either 'without XML' or 'with XML') while the 'Perform Content Comparison' setting is turned OFF will be lost. For conditional up-versioning to work during co-authoring, this system-level setting (activated by an admin) must be enabled at all times.

## 1.1 VIEWING AND COMPARING VERSIONS

Any object that has versioning enabled – such as a document or component, but usually includes other objects such as a product or study as well – can have its versions viewed by a user as follows:

1. Right-click on the document/component and click **View Versions**.

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

**Note:** If not accessing the document/component via the **Navigator**, the user can click the **vertical ellipsis** to view and click **View Versions**.

- The **View Versions** pop-up window will appear on the screen:

#### Notes:

- Only** 2 versions can be compared at a time.
- Using *MS Word* to compare an *InteliNotion* document with a local copy of the same document will not generate an accurate comparison of the 2 files. Therefore, this is not a suggested action.
- Using a local copy of an *InteliNotion* document in *MS Word* may not reflect the latest/updated values for the variable contained therein.

- Click **Compare Versions**.

Close Compare Versions

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

- A comparison of the 2 versions will display in track changes on the screen as follows:
  - Content in red strikeout indicates it is from the earlier version.
  - Content in green indicates it is from the later version.

**Note:** The version comparison may not display any changes if one of the versions being compared included a property/lifecycle state change **only** (ie, no content was changed between the selected versions).

## 1.2 RESTORING A PRIOR VERSION

A previous version of the document or component can be restored and made the current version. If a user chooses to restore a previous version, the restored version will have the previous content, however, a new version number is assigned. For a document/template, when a prior version is restored, the related components will not be auto refreshed to their most updated version, but instead display content as per the version that was associated with the document/template restored version.

**Note:** While restoring to a prior version, the respective document or component should not be open in *MS Word*.

1. From within the View Versions pop-up window (see above), click the ellipses to the far right and select **Restore**.

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

- Click **Yes** to confirm the restoration of the selected version.

- The restored version of the document/component will appear at the top of the list since it becomes the last modified version. The restored version also includes a system-generated comment indicating from which version it was created.

|                          | Version   | Modified On         | Modified By | Comment                                    | Size       |   |

## 1.5 PERFORMING BULK COMPONENT PROPERTY UPDATE VIA COMPONENT STATUS REPORT

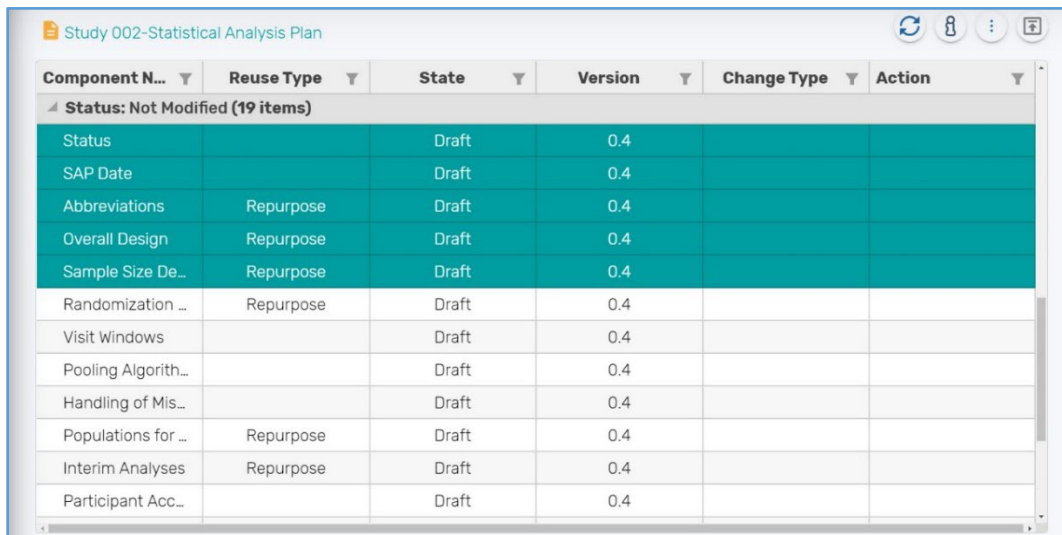

Multiple components can be updated at 1 time via the **Component Status Report** using the following steps:

1. Locate a document via the *Web Console* or *InteliNotion Word App*. Double click on the document to launch its **Component Status Report**.

| Component N...                    | Reuse Type | State | Version | Change Type | Action |
|-----------------------------------|------------|-------|---------|-------------|--------|
| ▲ Status: Not Modified (19 items) |            |       |         |             |        |
| Status                            |            | Draft | 0.4     |             |        |
| SAP Date                          |            | Draft | 0.4     |             |        |
| Abbreviations                     | Repurpose  | Draft | 0.4     |             |        |
| Overall Design                    | Repurpose  | Draft | 0.4     |             |        |

## 2. VIEWING DOCUMENT AND COMPONENT INFORMATION

To view the information (ie, properties) for an object (eg, document, component), either right-click on the object or click the ellipsis next to its name and select **View Information**. A page will display the properties for the object along with other information such as creation date, owner or owner change, unique document identifier, and ID.

**Note:** To copy the document ID, click the  icon next to the unique document number.

The 'owner' of an instantiated object is always set as the user who created the object, by default. The owner can be changed by either an admin or the current user identified as the owner. To update the owner, in the View Information page click the pencil icon next to the current owner's name and enter the new user in the **Change Owner** pop-up form.

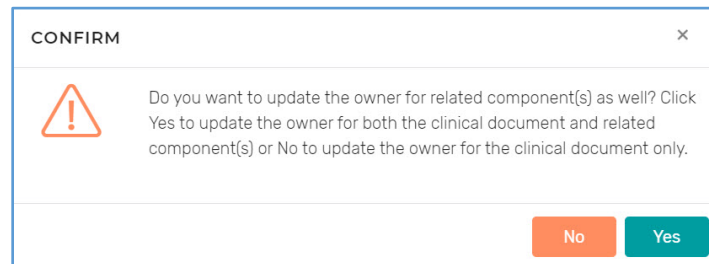

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

**Note:** When an owner of an object (eg a document) is changed, this update can be viewed in the object's version history.

When the owner of a document is updated, there is also the option to update the owner for its related, editable component(s), as shown below.

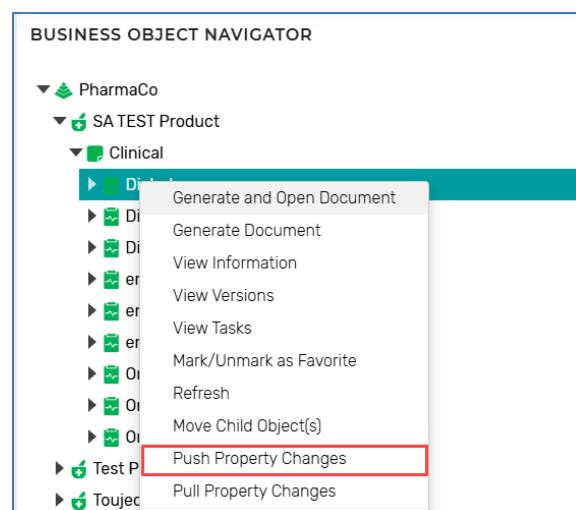

## 2.1 UPDATING INFORMATION FOR INHERITED PROPERTIES

Users with R-U permissions or full control admins have the option to propagate updates from a parent object to all its eligible child objects with the **Push Property Changes** action via the *Web console* or *Word app*. Child objects will be updated with this functionality unless the conditions to update are not met, eg, if the user does not have R-U permissions, the child object is approved or checked out, or if the number of child object for the parent objects exceeds the max system limit for allowable changes at one time.

Follow the steps listed below to push property changes to eligible child objects.

**Note:** The illustrations and steps below depict the *Web console*, but it is also possible to complete this functionality in the *Word app* Navigator.

1. In the *Web console* Navigator, locate the parent object, right click and select **Push Property Changes**.

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

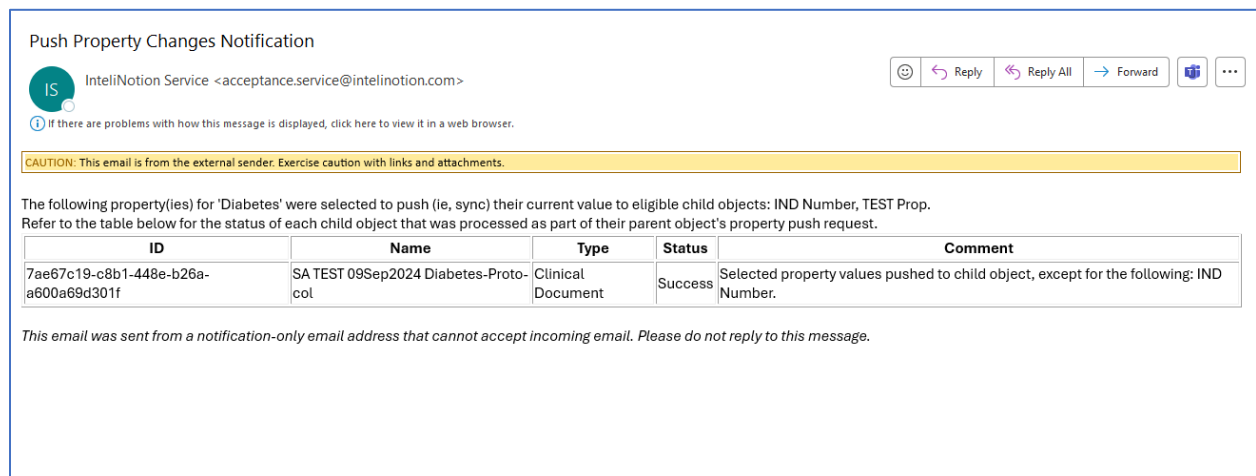

5. A confirmation screen will display. Click **Yes**.

6. A pop-up will display informing the user that the push operation has been initiated.

7. Once the operation has been completed, the user will receive an email notifying them of the status on each property and the eligible child object on which the change was attempted.

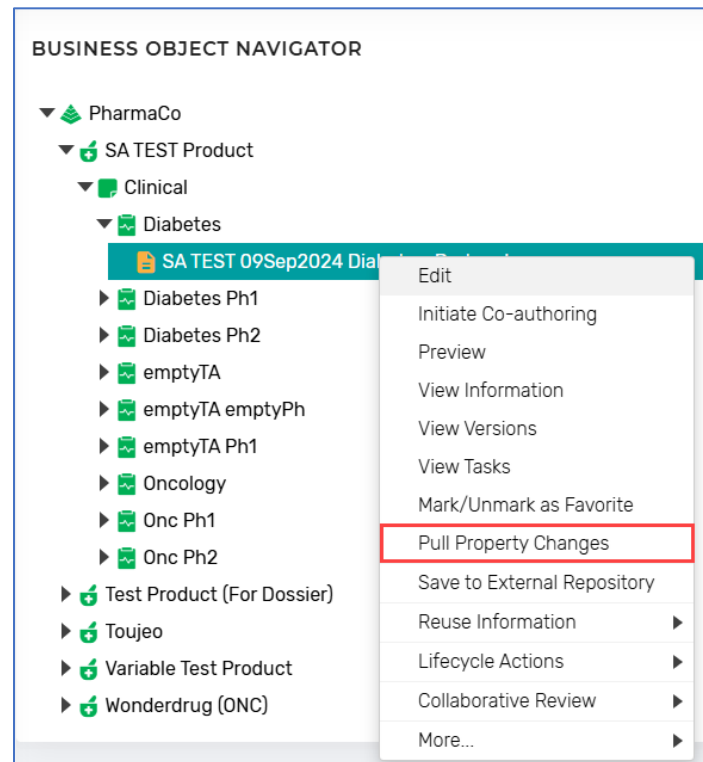

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

8. *IF* the email lists any child object that was not eligible at the time the property changes were pushed, the user can go to that individual object and initiate a Pull Property Changes action.

**Note:** This action follows the same process as steps 1-6, however, a **Pull Property Changes** action is only taken on the child object selected in the navigator instead of a bulk push action.

**Notes:**

- Components that are not displayed in navigator will not be updated after a **Push** operation and will not be available for **Pull** operation.
- The following objects will be ignored from push operation entirely and therefore not be included in the email sent out for **Push** notification:
  - Objects that are never displayed in the Navigator (eg Components)
  - Objects that were originally displayed in the Navigator but no longer display (due to a Navigation scheme change) will still be updated, as appropriate
  - Objects that a user does not have at least Read access to
  - Objects that do not have any of the selected properties for the parent object

Use and copying of any InteliNotion software described in this publication requires an applicable software license.

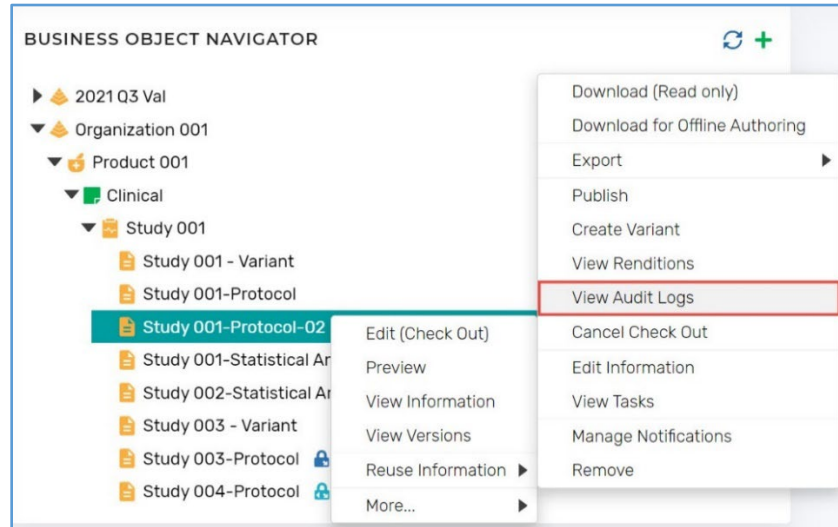

InteliNotion believes the information in this publication is accurate as of its publication date. The information is subject to change without notice.

Confidential and proprietary to InteliNotion LLC. This is subject to non-disclosure or confidentiality agreement and must not be shared without prior written consent of InteliNotion LLC.

### 3. VIEWING BUSINESS OBJECT AUDIT LOGS

An audit log is a chronological set of records that provides evidence of the sequence of activities that have been performed at any specific time on that business object. All users can view the audit logs for a specific document, component, task, or other business object instance within the system.

1. Right-click on the business object name in the **Navigators** and under **More**, click **View Audit Logs**.

2. A **View Audit Logs** pop-up window will appear, which lists all the audit logs for that business object:

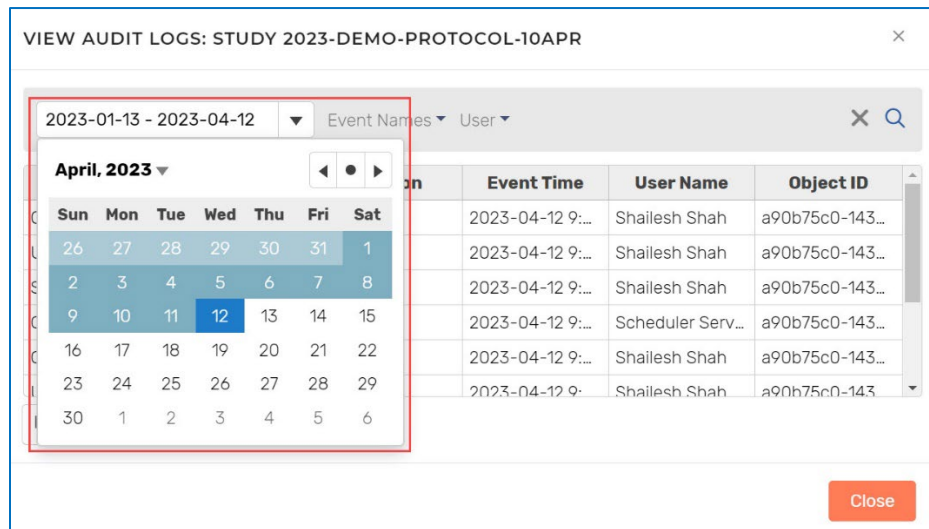

| VIEW AUDIT LOGS: PROT DRAFT COMP AS IS LIB IT                                    |                      |         |                    |           |                       |
